

Raised Spot UV Reseller Edition

Why choose Raised Spot UV
over embossed finishes

What makes Raised Spot UV different

Embossed pieces create texture with metal dies and pressure. Raised Spot UV achieves a similar tactile dimension without dies, adding a glossy highlight that brings logos, type and patterns to life — with greater design freedom and quicker production.

Gloss + texture
in a single finish.

No dies required fewer
steps to produce.

Design freedom for
logos, typography or
full patterns.

Modern look
that stands out
under light.

When to Offer Raised Spot UV

Not all Spot UV is the same. With us, you get Raised Spot UV — meaning the glossy areas are not only shiny, but also slightly elevated, creating a premium tactile effect that flat Spot UV cannot deliver.

Key Benefits of Raised Spot UV

Depth you can feel

Gloss + raised texture combined in one finish.

Premium perception

Clients instantly associate it with luxury print.

Perfect match with Soft Touch lamination

Matte + gloss contrast becomes even stronger.

Differentiation that sells

Raised Spot UV helps brands stand out from basic print.

Raised Spot UV is the premium upgrade that makes every project unforgettable.
